What's New?

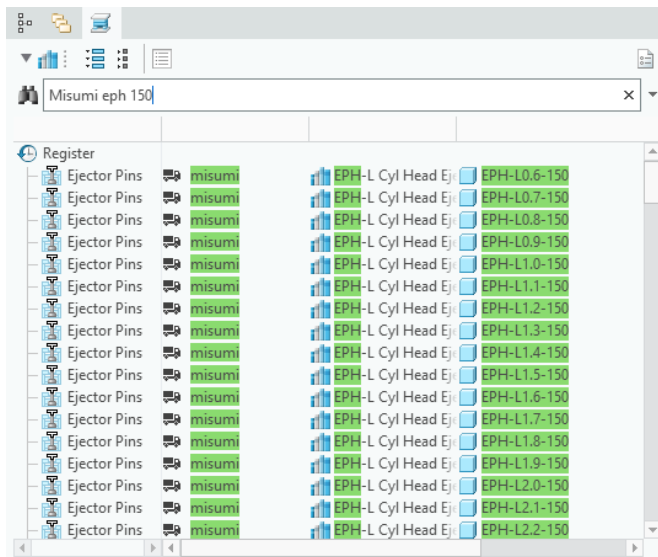

# Enhancement

- Improve the Extract fluid circuit functionality
  1. Improve algorithm to detect related fluid bores
  2. Implement new radio group with option to assemble a subassembly for fixed and moving half, but also a part for each cooling circuit
  3. Use progress bar to avoid freezing of Creo window

# Enhancement

- Implement solution to directly use measured values from Tiny Measure Tools in nominal values of component dialog
  1. Select dimension in nominal values table
  2. Open Tiny Measure Tools with Right Mouse Click
  3. Measure diameter, length or offset
  4. Best fit value will be used in nominal value table

The diagram illustrates the workflow for the enhancement. It starts with a 3D model of a shaft with a diameter dimension (DM1) and a length dimension (LG). A context menu is shown over the dimension table, with 'Measure Diameter' selected. An 'EMX Question' dialog box appears, displaying the measured diameter (4.500) and the best fit value (4.5), asking if the best fit result should be used in the nominal value. Finally, the dimension table is updated with the measured value of 4.5.

Dimension Name	Value	Type
DM1 - Diameter	0.4	
LG - Length	100	
OFFSET - Offset	0	
REF_ANGLE - Angle	0	
REF1 - Reference Dista	56.000
