SMARTLibrary

SMARTLibrary 6.0 Buildcode Contents

M030

M030 - 26.03.2014	Type	Description
#613	ENH	Add new menu function to export drawing tables to a CSV file and open it in EXCEL. The file is saved to the directory specified in the new option PATH_ABS_SAVECSV. If no path is set, the file is saved to the current working directory.
#654	ENH	Improve call times for the library. Add new options LOAD_ICON_FROM_LIBRARY and LOAD_DETAIL_FROM_LIBRARY.

M010

M010 - 11.10.2012	Type	Description
#17	FIX	Creo 2.0 - If you moved the mouse over the Ribbon, a dialog „Debug Assertion Failed!" appeared. This problem is fixed now.
#331	FIX	Sometimes tabulators after keywords (CBSCR, CBNUT, etc.) in the head of the *.dat files caused problems. These unused tabulators will be ignored by SMARTLibrary now. This problem often occurs if you edit the *.dat files with EXCEL.
#283	FIX	The Option REPLACE_PARAM_BY_DIM_IN_NOTE is-supported for Wildfire 4.0 again. With this option you will be able to replace parameters by dimensions in the hole note. This enables you to show tolerances in the hole note.
#282	FIX	In some cases entries from the *.mnu file are not shown in the dialog on 64bit systems. This was revised and tested. The problem is fixed now.

F000 – Main Release

F000 - 06.02.2012	Type	Description
